Properties of Solids and Liquids	<p>What is a Liquid?</p> <p>Let's watch the video at the link below to learn more about this type of matter.</p> <p>Read the informational passage and complete the activity sheet, as shown below.</p>																																																			

LIQUIDS

Have their own volume, NOT their own shape. They take the shape of the container they are in.

They remain liquids, even when they are poured or spilled.

The downloads are on the blog.

This will be a submitted piece of work.

What Is A Liquid?

Did you have a drink of water yet today? Maybe some milk? Those are liquids!

Liquids are objects that change shape. A liquid can be poured from one container into another one because it can flow. Even though it will look different, it is still a liquid, even when it is in a small container or if it spills. Liquids usually feel wet.

Liquids change to solids by freezing. When a liquid gets too cold it may freeze. A puddle of water may get cold and change from a liquid (water) to ice (solid).

Name:

What Is A Liquid

1. What is a liquid? Write at least 2 properties of liquids.

2. List at least 5 substances that are liquids.

3. How do liquids become solids?
o by being poured into containers
o when they are spilled
o when they get cold and freeze
o when they get warm and melt
