

Primary Data Collection 7/8A

Name: _____ Class: _____ Date: _____

Primary Data is data that we collect ourselves. We can control the reliability of the data and we know a lot about the subjects that we collect the data from.

As a class, we are going to collect some data from each student to determine if there is a correlation between hand span and height. While we are at it, we are going to collect some other primary data too. So, while we measure arm span and height in a controlled (accurate) way, we each are going to fill in the rest of our 'survey' and see about working with this data. We will then assemble the data in an electronic form for analysis.

Your name: _____

Arm Span: _____ cm

Height: _____ cm

Shoe size: _____

Eye colour: _____ - check with a classmate if unsure

Hair colour: _____

Favourite Food: _____

Favourite Movie: _____

Favourite Music Type: _____

Number of pets at home: _____

Number of Languages spoken: _____

When you are finished, collect the data from other classmates and fill in the class list provided.
