

Constructed Wetlands

Look up some websites or videos on Constructed Wetlands and try to find one that you find easy to understand. There are a lot of very technical videos and reading but there are some that are good too.

Use the information that you find to answer the following questions.

What are the benefits of constructed wetlands?

Why are they good for the environment?

How big are the constructed wetlands?

What are some organizations or companies that help build or support constructed wetlands?

****Interestingly, now that we know more about wetlands, we are replacing them and using them to help the environment and reducing the impact humans have on the ecosystems by letting wetlands do what they do.**
