

Experiential Learning Virtually

Making Connections

At its core, experiential learning is a student-centered approach to teaching and learning that helps children, youth and adult learners develop the habits of reflecting, questioning, wondering and deliberating to inform action.

Reflecting and Connecting

One of the fastest ways to create an atmosphere of inclusion within a group is to help the members of the group identify others within the group that share their same interests, opinions and choices.

TRY THIS:

Have students in a chat pod, through a discussion area or via a posted picture, share their ideas about a particular subject area.

Possible shout outs:

Favourite at home activity	Favourite subject in school
Favourite app they use	Favourite singer
Number of family members	
Favourite foods	
Favourite television series	

The development of a reflective mindset gives students the ability to turn every experience into a learning experience.
