

## Problem of the Week

### Problem B

I have a dog, a cat and a bird that I want to get across a river in my boat. There can only be one animal in the boat at a time with me. The dog cannot be left alone with the cat, nor can the cat be left alone with the bird. When they are in the boat, I can control the animals so that is not a problem.

How do I get all three animals across the river safely?
